

## API Development using Django REST Framework

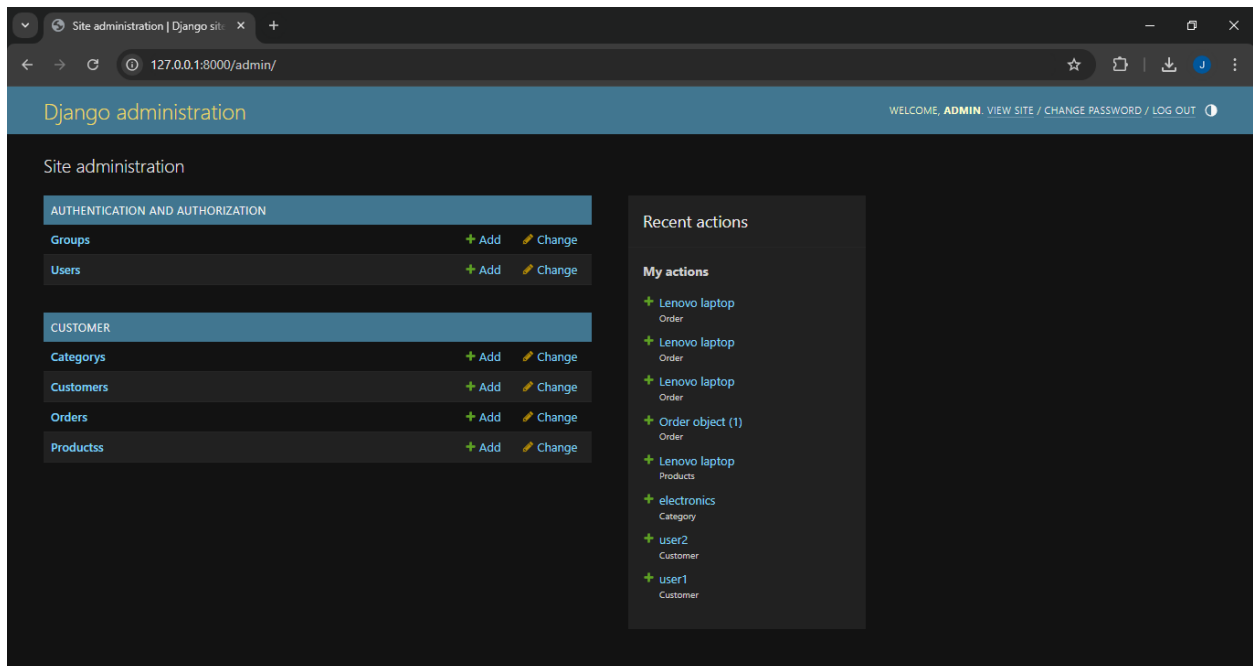

### Pre-requisites:

- Python 3.12
- Django Framework
- Django REST Framework Library
- Mysql Client Library

### Abstraction:

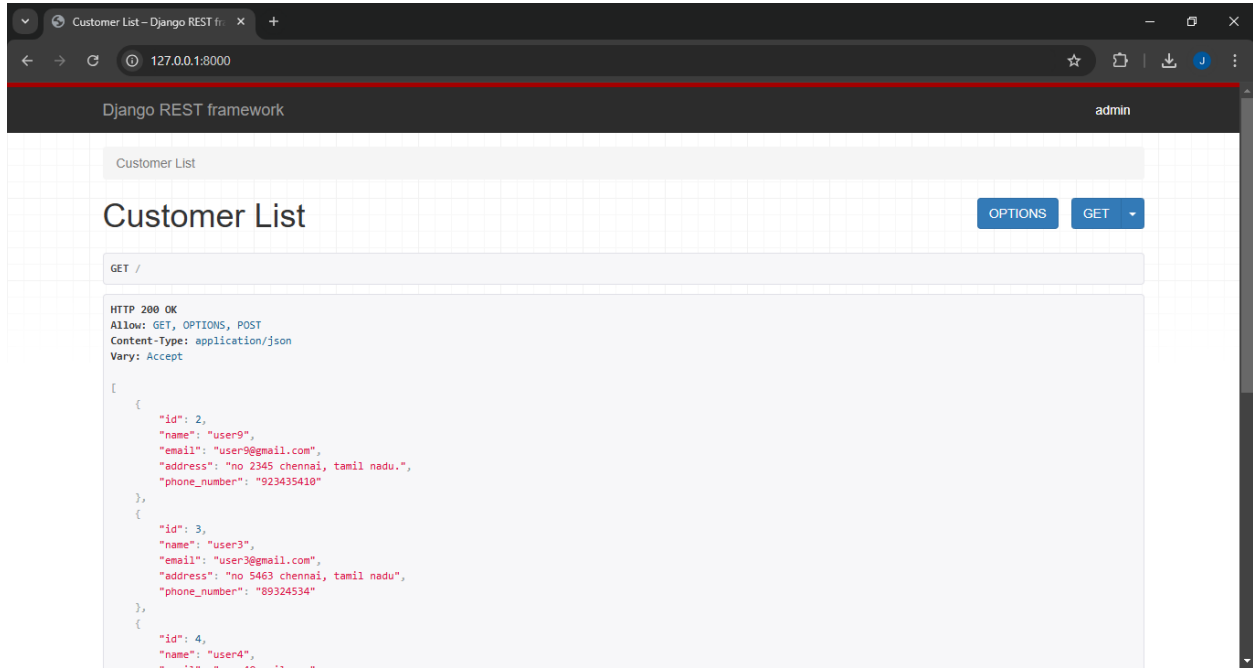

In this assignment, I developed a Django REST API to manage customer data effectively. The API provides endpoints to perform CRUD (Create, Read, Update, Delete) operations on Mysql database, allowing clients to retrieve, add, update, and delete customer, Products, Order and Category records. Using HTTP methods GET, POST, PUT, and DELETE.

### Admin Interface:

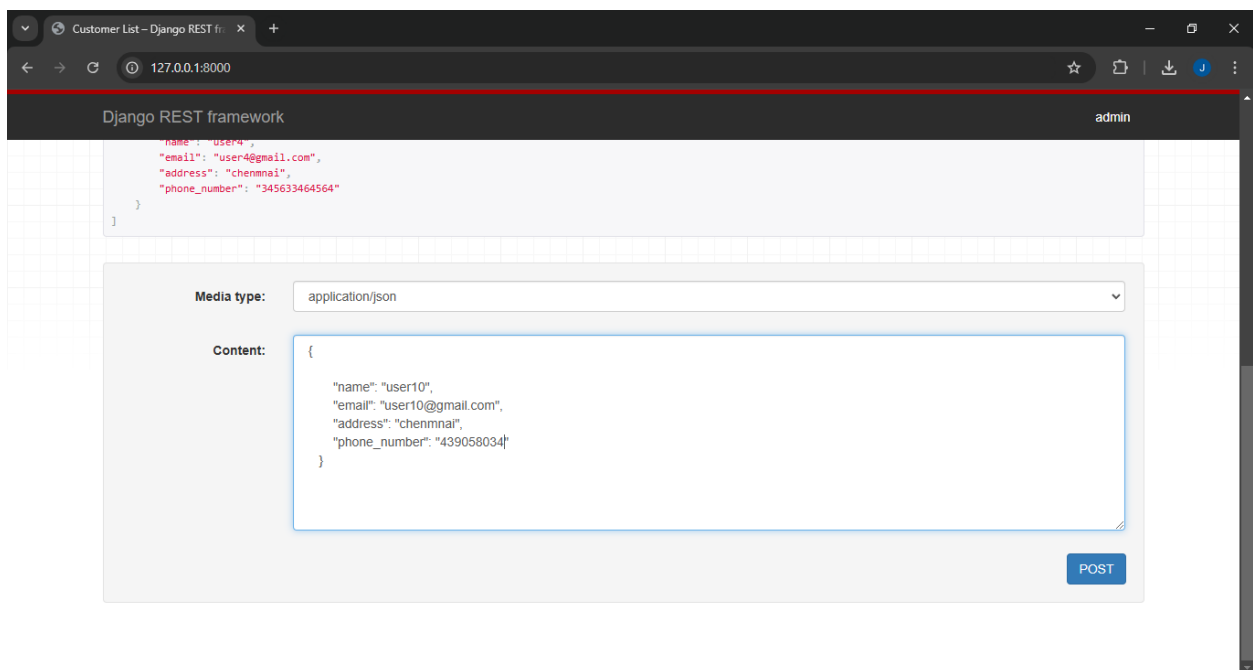

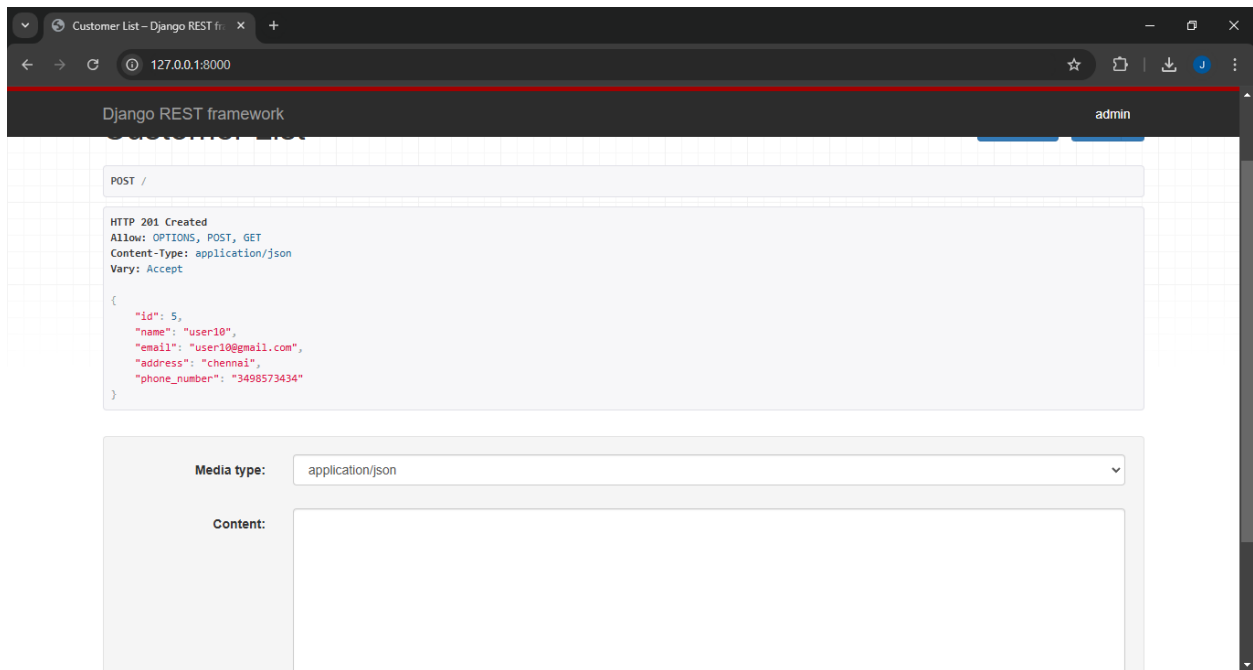

## Customer Data:

## GET Method

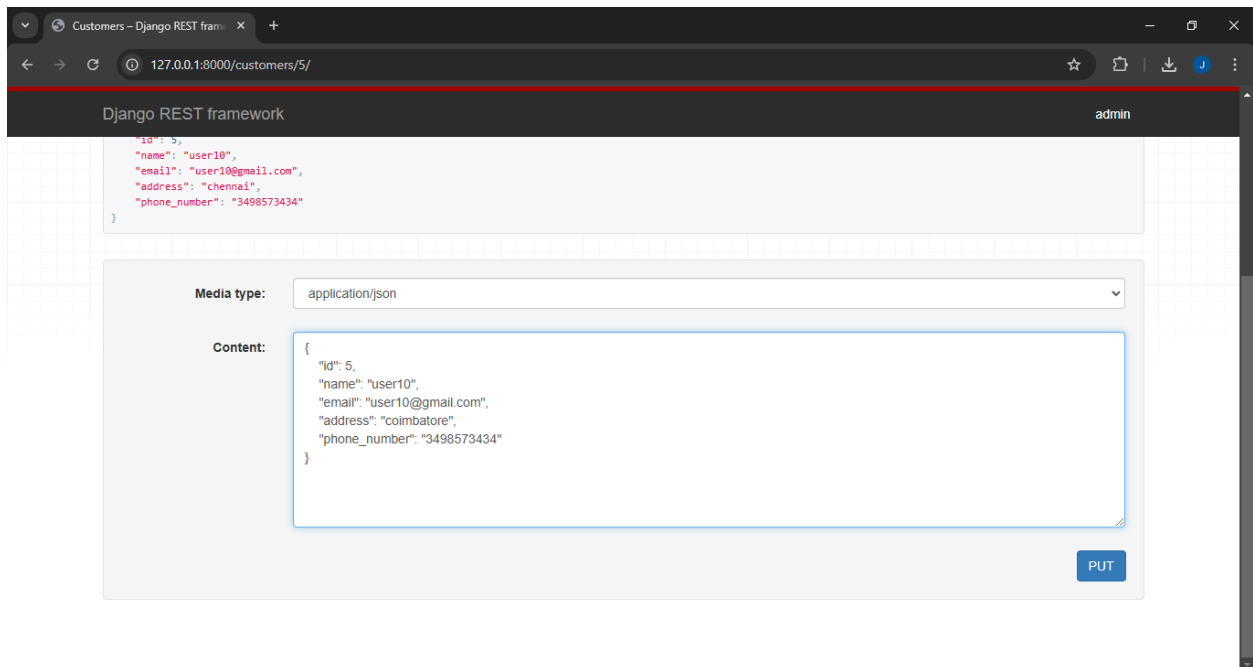

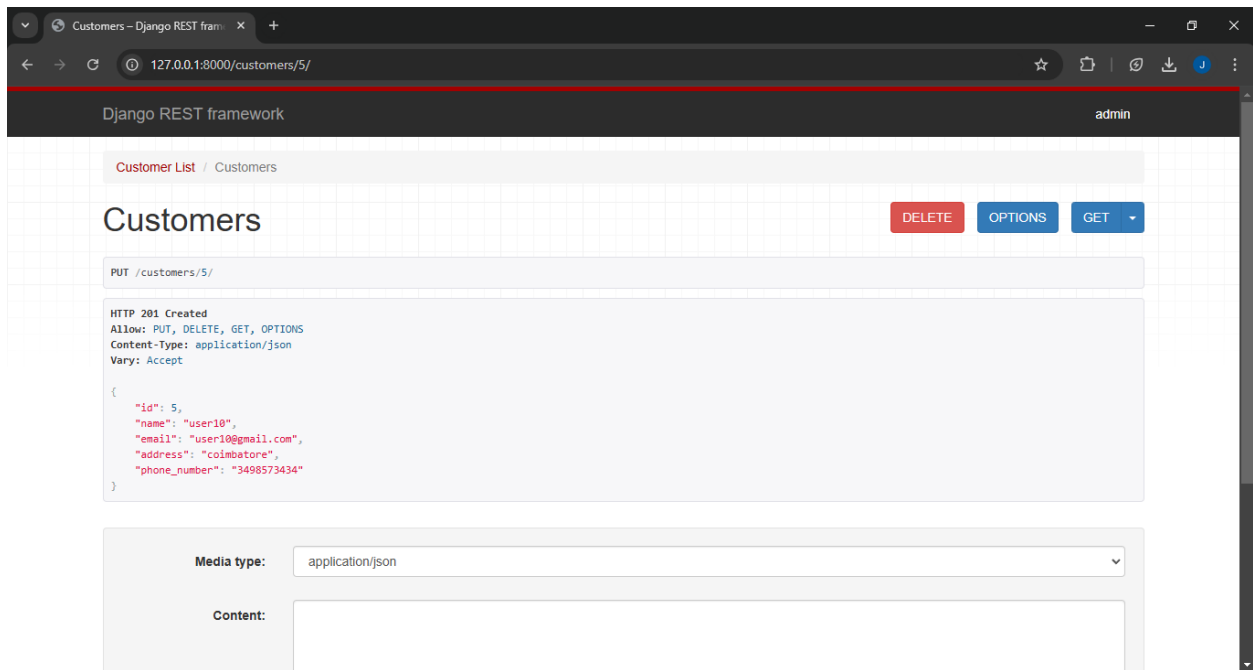

## POST Method:

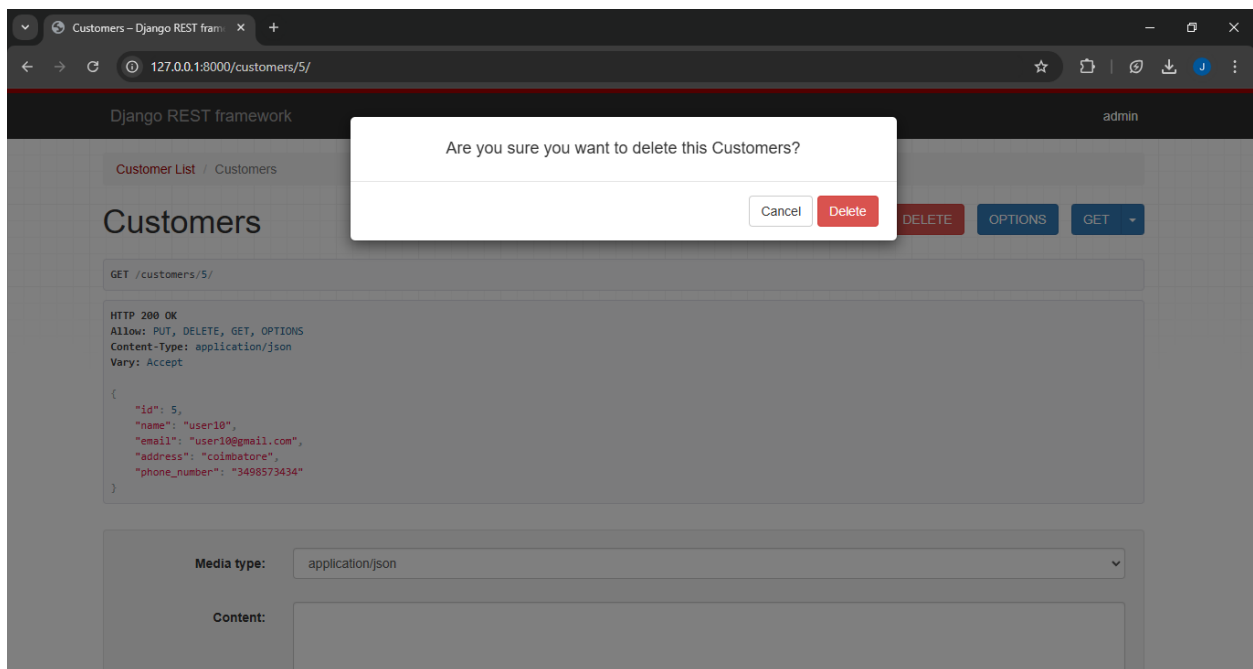

## PUT Method:

## DELETE Method:

Customers - Django REST fram

127.0.0.1:8000/customers/5/

☆ | | | | |

Django REST frameworkadmin

Customer List / Customers

DELETEOPTIONSGET

DELETE /customers/5/

HTTP 204 No Content  
Allow: PUT, DELETE, GET, OPTIONS  
Content-Type: application/json  
Vary: Accept

Media type:application/json
